

# Quick bar

## What do the icons mean?

### Understanding the MLE Quick bar

This is a picture of the MLE quick bar

The quick bar is downloaded and added as a toolbar to the Internet browser.

The quick bar creates links between the outside Internet and the MLE. Users can view external websites and add them to their personal area, make notes about them or inform others about them.

### The different icons

**My digitalbrain.** Takes the user back to his/her personal homepage.

**Visit User.** Allows the user to visit the homepage of another user.

**Make a Note.** Create a note about a web page being viewed. Notes are stored and organised in 'My Notes' folder from the personal homepage.

**Make a Link.** Clicking here will create a link to that specific webpage within the user's homepage area.

**Inform.** Creates an automated email with a link to the current webpage being viewed. Useful for sending others links to useful websites.

**Enlarge (or Restore) Screen**

**Quick bar Properties.** This defines the URL used in the Quick bar navigation. It is set as <http://www.digitalbrain.com> by default but should be the URL of the digitalbrain service, which you log in to.
